PROFESSIONAL SUMMARY

I am a newly graduated web developer offering enthusiasm and understanding of various programming languages. Looking to join an organisation where the opportunity for growth and personal development is embraced.

Working over the last 15 years as a Class C+E HGV Driver for various companies. Wide range of goods collected and delivered successfully. Whilst working for Bibby Distribution I was promoted to a role as Driver Assessor, Mentor and Trainer.

Before gaining my HGV licence I worked as a First-Line Support Analyst for Phoenix IT Solutions based in Northampton. We supported two major blue-chip clients users (The Crown Prosecution Service, and Ofsted).

Their users were working from home and the crown courts.

Both of these roles required security clearance. Something that would not be an issue to achieve again if required so as I do not have any convictions and a clean driving licence.

Whilst working on the Helpdesk I volunteered as a Special Police Constable for Northamptonshire Police in evenings and weekends.

I have very strong customer service skills that have been demonstrated in all of my roles. Also, I can work as a member of a team in an office or home-based. For example, being a member of the winning team in the latest Hackerthon event run by the Code Institute. This involved working remotely using GitHub, Trello Agile Boards, and regular Zoom Meetings to create a Full Stack project within a very short time scale.

I am currently located in Northamptonshire and would be happy to Commute, Relocate or Work Remotely as required.

EDUCATION

Diploma in Software Development (Second Class Honours)

Code Institute – August 2020

I am currently expanding my knowledge by undertaking online courses with Udemy and Pluralsight. My current courses are concentrated on coding with React.

CURRENT EMPLOYMENT

Full Stack Developer - Freelance

Silverheath Limited (Own Company)

https://www.silverheath.co.uk

August 2019 to Present

Working as a freelance developer. Successfully sourcing clients from LinkedIn and Facebook. Using the Software Development Lifecycle (SDLC) to create and deploy projects. Compete range or sites created and maintained. Landing page style company profile sites ranging to full e-commerce shops.

Following the latest industry standards, all of my projects were designed, coded and tested for use on all screen sizes Mobile Phone, Tablet and Desktops. Github has been used along with Heroku to host the full stack projects.

Listed below are some examples of my work:

Silverheath Limited - Own Company

HTML, Javascript, CSS and Bootstrap
